Writing Strategies: Thesis Statements and Key Terms

1. Go to the WRC reception desk and ask to check out Axelrod and Cooper’s St. Martin’s Guide to Writing 8th edition. You will need a driver’s license or other photo identification to check this book out for use in the WRC.

2. Read pages 610-611 on the topic of “Cueing the Reader.”

3. Answer the following questions about your reading on a separate sheet of paper:
   a. What is an orienting statement? What are the two types?
   b. How does the thesis statement act as an orienting statement?
   c. Why is having a thesis statement important?
   d. Why is the thesis often placed early in a piece of writing?

4. Now is a good time to STOP and visit an instructor or a tutor to review your answers. Write any questions you may have below before you go, and get a signature when you finish.

   Instructor name                                         Date

Once you are ready, go on to #5.

5. Now use Jessica Statsky’s essay (attached) to locate the thesis and key terms in the essay. Use a pen to underline the thesis and circle key terms. See exercise 13.1 at the bottom of page 611 for examples of key terms.

6. Answer the questions in the second paragraph of exercise 13.1 on a separate sheet of paper.

   7. STOP. Visit a tutor or instructor and review your annotations and your responses. Then, have that person sign and date below.

   Instructor name                                         Date

DLA #1A.15/ SLO 1A/B
Children Need to Play, Not Compete
Jessica Statsky

Over the past three decades, organized sports for children have increased dramatically in the United States. And though many adults regard Little League Baseball and Peewee Football as a basic part of childhood, the games are not always joyous ones. When overzealous parents and coaches impose adult standards on children's sports, the result can be activities that are neither satisfying nor beneficial to children.

I am concerned about all organized sports activities for children between the ages of six and twelve. The damage I see results from noncontact as well as contact sports, from sports organized locally as well as those organized nationally. Highly organized competitive sports such as Peewee Football and Little League Baseball are too often played to adult standards, which are developmentally inappropriate for children and can be both physically and psychologically harmful. Furthermore, because they eliminate many children from organized sports before they are ready to compete, they are actually counterproductive for developing either future players or fans. Finally, because they emphasize competition and winning, they unfortunately provide occasions for some parents and coaches to place their own fantasies and needs ahead of children's welfare.

One readily understandable danger of overly competitive sports is that they truly entice children into physical actions that are bad for growing bodies. Although the official Little League Web site acknowledges that children do risk injury playing baseball, they insist that severe injuries are infrequent, "far less than the risk of riding a skateboard, a bicycle, or even the school bus" ("What about My Child?"). Nevertheless, Leonard Koppett in Sports Illusion, Sports Reality claims that a twelve-year-old trying to throw a curve ball, for example, may put abnormal strain on developing arm and shoulder muscles, sometimes resulting in lifelong injuries (294).
Contact sports like football can be even more hazardous. Thomas Tutko, a psychology professor at San Jose State University and coauthor of the book *Winning Is Everything and Other American Myths*, writes:

I am strongly opposed to young kids playing tackle football. It is not the right stage of development for them to be taught to crash into other kids. Kids under the age of fourteen are not by nature physical. Their main concern is self-preservation. They don't want to meet head on and slam into each other. But tackle football absolutely requires that they try to hit each other as hard as they can. And it is too traumatic for young kids. (qtd. in Tosches A1)

As Tutko indicates, even when children are not injured, fear of being hurt detracts from their enjoyment of the sport. The Little League Web site ranks fear of injury as the seventh of seven reasons children quit ("What about My Child?"). One mother of an eight-year-old Peewee Football player explained "The kids get so scared. They get hit once and they don't want anything to do with football anymore. They'll sit on the bench and pretend their leg hurts..." (qtd. in Tosches). Some children are driven to even more desperate measures. For example, in one Peewee Football game, a reporter watched the following scene as a player took himself out of the game:

"Coach, my tummy hurts. I can't play," he said. The coach told the player to get back onto the field. 'There’s nothing wrong with your stomach, he said. When the coach turned his head the seven-year-old stuck a finger down his throat and made himself vomit. When the coach turned back, the boy pointed to the ground and told him, "Yes there is, coach. See?" (Tosches A33)
Besides physical hazards and anxieties, competitive sports pose psychological dangers for children. Martin Rablovsky, a former sports editor for the *New York Times* says that in all his years of watching young children play organized sports, he has noticed very few of them smiling. "I've seen children enjoying a spontaneous pre-practice scrimmage become somber and serious when the coach's whistle blows," Rablovsky says. "The spirit of play suddenly disappears, and sport becomes joblike" (qtd. in Coakley 94). The primary goal of a professional athlete—winning—is not appropriate for children. Their goals should be having fun, learning, and being with friends. Although winning does add to the fun, too many adults lose sight of what matters and make winning the most important goal. Several studies have shown that when children are asked whether they would rather be warming the bench on a winning team or playing regularly on a losing team, about 90 percent choose the latter (Smith, Smith, and Smoll 11).

Winning and losing may be an inevitable part of adult life, but they should not be part of childhood. Too much competition too early in life can affect a child's development. Children are easily influenced, and when they sense that their competence and worth are based on their ability to live up to their parents' and coaches' high expectation—and on their ability to win—they can become discouraged and depressed. Little League advises parents to "keep winning in perspective" ("Your Role"), noting that the most common reasons children give for quitting aside from change in interest, are lack of playing time, failure and fear of failure, disapproval by significant others, and psychological stress ("What about My Child?")). According to Dr. Glyn C. Roberts, a professor of kinesiology at the institute of Child Behavior and Development at the University of Illinois, 80 to 90 percent of children who play competitive sports at a young age drop out by sixteen (Kutner).
This statistic illustrates another reason I oppose competitive sports for children: because they are so highly selective, very few children get to participate. Far too soon, a few children are singled out for their athletic promise, while many others, who may be on the verge of developing the necessary strength and ability, are screened out and discouraged from trying out again. Like adults, children fear failure, and so even those with good physical skills may stay away because they lack self-confidence. Consequently, teams lose many promising players who with some encouragement and experience might have become stars. The problem is that many parent-sponsored, out-of-school programs give more importance to having a winning team than to developing children's physical skills and self-esteem.

Indeed, it is no secret that too often scorekeeping, league standings, and the drive to win bring out the worst in adults who are more absorbed in living out their own fantasies than in enhancing the quality of the experience for children (Smith, Smith, and Smoll 9). Recent newspaper articles on children's sports contain plenty of horror stories. *Los Angeles Times* reporter Rich Tosches, for example, tells the story of a brawl among seventy-five parents following a Peewee Football game (A33). As a result of the brawl, which began when a parent from one team confronted a player from the other team, the teams are now thinking of hiring security guards for future games. Another example is provided by an *L.A. Times* editorial about a Little League manager who intimidated the opposing team by setting fire to one of their team's jerseys on the pitching mound before the game began. As the editorial writer commented, the manager showed his young team that "intimidation could substitute for playing well" ("The Bad News").

Although not all parents or coaches behave so inappropriately, the seriousness of the problem is illustrated by the fact that Adelphi University in Garden City, New York, offers a
sports psychology workshop for Little League coaches, designed to balance their "animal
instincts" with "educational theory" in hopes of reducing the "screaming and hollering," in the
words of Harold Weisman, manager of sixteen Little Leagues in New York City (Schmitt). In a
three-and-one-half-hour Sunday morning workshop, coaches learn how to make practices more
fun, treat injuries, deal with irate parents, and be "more sensitive to their young players' fears,
emotional frailties, and need for recognition." Little League is to be credited with recognizing the
need for such workshops.

Some parents would no doubt argue that children cannot start too soon preparing to live
in a competitive free-market economy. After all, secondary schools and colleges require students
to compete for grades, and college admission is extremely competitive. And it is perfectly
obvious how important competitive skills are in finding a job. Yet the ability to cooperate is also
important for success in life. Before children are psychologically ready for competition, maybe
we should emphasize cooperation and individual performance in team sports rather than
winning.

Many people are ready for such an emphasis. In 1988, one New York Little League
official who had attended the Adelphi workshop tried to ban scoring from six- to eight-year-olds'
games—but parents wouldn't support him (Schmitt). An innovative children's sports program in
New York City, City Sports for Kids, emphasizes fitness, self-esteem, and sportsmanship. In this
program's basketball games, every member on a team plays at least two of six eight-minute
periods. The basket is seven feet from the floor, rather than ten feet, and a player can score a
point just by hitting the rim (Bloch). I believe this kind of local program should replace overly
competitive programs like Peewee Football and Little League Baseball. As one coach explains,
significant improvements can result from a few simple rule changes, such as including every
player in the batting order and giving every player, regardless of age or ability, the opportunity to play at least four innings a game (Frank).

Authorities have clearly documented the excesses and dangers of many competitive sports programs for children. It would seem that few children benefit from these programs and that those who do would benefit even more from programs emphasizing fitness, cooperation, sportsmanship, and individual performance. Thirteen and fourteen-year-olds may be eager for competition, but few younger children are. These younger children deserve sports programs designed specifically for their needs and abilities.
